PROFESSIONAL SUMMARY

Software Engineer (Java Full-Stack) with a PG Diploma in Advanced Computing from CDAC, focused on back-end development, SQL and relational database design. Built web-based applications on microservices and layered code architecture using Spring Boot, React.js, REST APIs, JWT security and MySQL, including a Stripe-integrated travel booking platform. Diagnosed and fixed a database performance bottleneck (N+1 queries), writes well-designed, testable code with JUnit 5 and Mockito, and collaborates across services in a team project. Strong DSA and OOP foundation (200+ problems solved).

TECHNICAL SKILLS

Programming Languages	Java, SQL, JavaScript
Frontend Technologies	React.js, React Router, Axios, HTML5, CSS3
Backend Technologies	Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, RESTful APIs, Microservices, Spring Cloud API Gateway, JWT Authentication
Databases	MySQL, SQL Queries, Relational Data Modeling, Query Optimization (JPA/Hibernate)
Tools & Testing	Git, GitHub, Maven, Postman, JUnit 5, Mockito
Engineering Practices	OOP, Code Architecture, Layered Architecture, Unit & Integration Testing, Exception Handling, Code Quality, Software Development Life Cycle, DSA

PROJECTS

TripSync – Travel Booking Platform — Team Project

Technologies: Java 21, Spring Boot, Spring Cloud API Gateway, Spring Security, JWT, React 19, React Router, Axios, Stripe, JUnit 5, Mockito, Postman

- Built a web-based travel booking platform on a **microservices architecture** (Auth, Catalog, Booking, Feedback) behind an API Gateway as the single entry point, collaborating in a team across independent services.
- Implemented **JWT authentication** and role-based access control (Admin/User) with Spring Security.
- Integrated **Stripe** payments into the booking flow, with automatic booking confirmation after payment.
- Contributed to back-end and front-end development: tour package browsing, booking and 1–5 star reviews, with a React 19 frontend using protected routes and Axios.
- Wrote testable code with unit tests (JUnit 5, Mockito) and integration tests per service, and verified APIs with Postman.

Prime Properties – Real Estate Listing Application — CDAC Capstone

Technologies: Java 17, Spring Boot, Spring Security, Hibernate/JPA, MySQL, JWT, React.js, Axios, HTML5, CSS3, JUnit 5, Mockito

- Built a full-stack property platform for buyers, owners and admins on a layered code architecture (Controller, Service, Repository) backed by a relational MySQL database.
- Found and fixed an **N+1 query problem** in the listing flow using JOIN FETCH and @EntityGraph, confirmed by comparing database call counts before and after, improving performance and scalability.
- Secured REST endpoints with **JWT** and role-based access control; added input validation and consistent error responses (400/401/403/404).
- Implemented owner features to add, update and delete listings, with a safeguard that blocks deletion of properties with active bookings.
- Tested business logic and role-based authorization with JUnit 5 and Mockito; validated APIs with Postman.

EDUCATION

PG Diploma in Advanced Computing (PG-DAC) — 2026
Institute of Advanced Computing (IACSD), CDAC, Pune — Score: 70%

Bachelor of Engineering — 7.91 CGPA
Dr. D. Y. Patil School of Engineering, Pune

Diploma in Engineering — Score: 70%
Government Polytechnic, Awasari (Khurd), Pune

ADDITIONAL STRENGTHS

- Back-End Development
- Database Query Optimization
- Unit & Integration Testing
- REST API Design & Integration
- Microservices Architecture
- DSA & Problem Solving (200+)
