# RISHI DUSANE

*Software Engineer · Backend | Java · Python · Node.js · Spring Boot · Microservices · React*

Pune, MH · +91-9834080685 · rishidusane5@gmail.com · github.com/RishiDusane · linkedin.com/in/rishidusane

## TECHNICAL SKILLS

**Languages:** Java, Python, JavaScript, SQL, C#, C++

**Backend:** Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, FastAPI, Express.js, REST API Design, Microservices, JWT, RBAC

**Frontend:** React 18, Vite, Axios, HTML5, CSS3

**Databases:** MySQL, PostgreSQL, MongoDB, SQLite, SQLAlchemy

**DevOps & Tooling:** Docker, Docker Compose, GitHub Actions, Git, Maven, Swagger/OpenAPI, Postman

**Testing:** JUnit 5, Unit Testing, Integration Testing, Jacoco

**AI Integration:** Google Gemini API (Generative AI)

## PROJECTS

**TripSync — Full-Stack Microservices Travel Booking Platform** *Jan 2026 – Feb 2026*

**Stack:** Java 21 · Spring Boot · Spring MVC · Spring Security · MySQL · PostgreSQL · JWT · Docker · GitHub Actions · React 18 · Vite · Axios

- **Designed** a 5-service microservices architecture (Bookings, Users, Payments, Notifications, API Gateway) with domain-driven boundaries, inter-service REST contracts, and a React 18 + Vite frontend; each service independently deployable via Docker Compose.
- **Engineered** 23 REST API endpoints with centralized exception handling, @Valid input validation, and JWT-based auth enforcing RBAC across three roles (Admin / User / Agent); protected-route logic mirrored on the React frontend.
- **Optimized** booking-search query latency by profiling with MySQL EXPLAIN — added composite indexes on foreign-key and filter columns and eliminated 2 redundant JOIN tables, cutting slow-query execution time on high-cardinality searches.
- **Achieved** 75% service-layer coverage (Jacoco) with JUnit 5; documented all endpoints with Swagger/OpenAPI; automated CI pipeline via GitHub Actions on every push to main.

**AI Interview Copilot — Resume-Aware Interview Simulator** *Feb 2026 – Mar 2026*

**Stack:** Python · FastAPI · Google Gemini API · React 18 · JWT · SQLite · SQLAlchemy · bcrypt

- **Architected** an async FastAPI backend that accepts PDF resume uploads, extracts structured content, and generates role-specific interview questions via Google Gemini API; async I/O handlers maintain p95 response time under 2 s on local load tests.
- **Implemented** hardened error handling with multi-layer fallback parsing — when Gemini returns malformed output the API surfaces structured 4xx/5xx JSON (not raw 500s), enabling reliable frontend error recovery.
- **Built** end-to-end auth: registration, email verification, bcrypt password hashing (cost factor 12), JWT-protected routes, and password reset flow — across both FastAPI and React 18.
- **Structured** business logic into a strict service layer, decoupling the Gemini integration behind an interface, making the AI component independently unit-testable and swappable.

## EDUCATION

**Post Graduate Diploma in Advanced Computing (PG-DAC)** *2025 – 2026*

IACSD, Pune · 68.3% · Coursework: Java, DSA, RDBMS, OOP, OS, Networking, Spring Boot, Microservices

**Bachelor of Engineering — Mechanical Engineering** *2017 – 2021*

Dr. D.Y. Patil School of Engineering, Pune · CGPA: 7.91

## CAREER NOTE

2021–2025: Full-time preparation for UPSC Civil Services Examination (CSE) — India's highest-tier competitive examination, requiring sustained analytical depth and self-directed discipline across Economics, Law, and Governance.

Transitioned deliberately to software engineering in 2025; completed CDAC PG-DAC and built production-grade full-stack systems within 6 months.
